Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, drawn to a tissue-specific promoter and method of making it.

Group II, claim(s) 7-24, drawn to an expression cassette comprising a tissue-specific promoter and an antisense-RNA-encoding sequence, methods for its use to transform plants, and the resultant plants.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions are linked by the technical feature of a promoter which expresses in all plant tissues except dry or mature seeds, and which has at least 80% sequence identity with any portion of any length of an Arabidopsis FAH promoter. However, this feature is not special because it does not constitute an advance over the prior art. Guivarc'h et al (submitted by Applicant) teach an isolated rolA promoter which expresses in all tissues except the seed (see, e.g., page 125, Abstract), wherein said promoter would inherently contain a fragment comprising a single base pair which would have 100% sequence identity to a single base pair of an Arabidopsis FAH promoter.

Furthermore, the inventions are not linked by a single special technical feature because they involve physiologically and biochemically divergent starting materials and processes.

The invention of Group I, a first product and method of making it, involves an FAH promoter from any plant, and methods of gene hybridization or gene amplification with particular primers, each not required by the other group. The invention of Group II, a second product and method of using it, requires expression cassettes, vectors, antisense-RNA-encoding sequences, plant transformation methods, and plant regeneration methods, each not required by the other group.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David T. Fox whose telephone number is (571) 272-0795. The examiner can normally be reached on Monday through Friday from 10:30AM to 7:00PM.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-1600.
